
Employment

Backend Engineer **Andpad Vietnam** **Mar 2022 - Present**

SaaS Platform for the Construction Industry

- Developed modules for managing construction workers' schedules across different project stages.
- Optimized the legacy codebase and SQL queries as the platform scaled to 3,000+ customers and 1,000+ active users.
- Contributed to business roadmap discussions, team processes, and improvements to engineering operations.
- Developed and maintained backend and frontend services using Golang, MySQL, and Kubernetes.

Tech stack: Golang, Ruby on Rails, MySQL, AWS, Redis, Kubernetes**Backend Engineer** **Nobee** **May 2021 - Feb 2022**

U.S. Rental Marketplace Startup

- Developed a rental marketplace for landlords, renters, and real estate agencies in the U.S. market.
- Built modules that allowed agencies and landlords to create and manage rental property listings.
- Optimized the legacy codebase, SQL queries, and frontend performance to improve application speed and user experience.
- Developed and maintained the application using Ruby on Rails, React.js, and PostgreSQL.

Tech stack: Ruby on Rails, Node.js, React.js, PostgreSQL, AWS**Fullstack Engineer** **Freelancer** **Dec 2020 - Apr 2021**

Livestream E-commerce Website

- Built a multi-category livestream shopping application using Twilio.
- Integrated the Shopify API, allowing viewers to browse and purchase products directly during livestreams.
- Developed and maintained the application using Ruby on Rails, React.js, and PostgreSQL.

Tech stack: Ruby on Rails, PostgreSQL, Twilio, Shopify API**Fullstack Engineer** **Golden Owl Consulting Ltd** **Jul 2019 - Dec 2020**

Software outsourcing company serving the Australian and Southeast Asian markets

- Developed event management modules, including event hosting, reward points, and booking features.
- Integrated livestreaming using Twilio, including real-time interaction features such as question voting and viewer reactions.
- Developed customization features that allowed users to configure layouts, colors, and themes for their events.
- Developed and maintained the application using Ruby on Rails, React.js, and PostgreSQL.

Tech stack: Ruby on Rails, Node.js, React.js, PostgreSQL, Twilio, Redis**Fresher Javascript Engineer** **BLOOD INC** **Aug 2018 - Jun 2019**

Blockchain-based real estate game for the Korean market

- Built a React.js SPA using Google Maps API, allowing users to purchase virtual land displayed in a grid-based layout.
- Developed mini-games such as Rock Paper Scissors, farming, and lottery games that allowed users to earn BLOOD COIN, the company's cryptocurrency.
- Integrated payment, deposit, and withdrawal features with BLOOD WALLET, another product in the company's ecosystem.
- Developed and maintained backend APIs using Node.js, Express.js, MongoDB, and Redis.

Tech stack: React.js, Node.js, Express.js, MongoDB, Redis, Google Maps API

Skills

Software:

- *Proficient:* Golang, Ruby, Typescript, MySQL, Redis, Git.
- *Familiar:* K8s, AWS, Claude, Codex, JIRA.

Education

- **Major:** Bachelor of Software Engineering
- **Coursework:** Data Structures & Algorithms, Graph Theory, Web Development, Mobile Development, Machine Learning, Computer Vision, Software Management.
